

A personal VSCodium setup

Jesús Rubio

Guildford, 2 September 2025

1. Installed extensions

All installed extensions can be displayed by opening a terminal and running:

```
codium --list-extensions
```

In my setup, this yields, in alphabetical order, the following list:

```
ecmel.vscode-html-css  
huytd.github-light-monochrome  
james-yu.latex-workshop  
mads-hartmann.bash-ide-vscode  
ms-python.debugpy  
ms-python.python  
ms-python.vscode-python-envs  
ms-toolsai.jupyter  
ms-toolsai.jupyter-keymap  
ms-toolsai.jupyter-renderers  
ms-toolsai.vscode-jupyter-cell-tags  
ms-toolsai.vscode-jupyter-slideshow  
ms-vscode.live-server  
streetsidesoftware.code-spell-checker  
streetsidesoftware.code-spell-checker-british-english  
streetsidesoftware.code-spell-checker-spanish  
swmore.fortls  
tecosaur.latex-utilities  
the0807.uv-toolkit  
timonwong.shellcheck
```

2. Installing extensions

A single extension can be installed as:

```
codium --install-extension <extension-id>
```

For example:

```
codium --install-extension ms-python.python
```

To simultaneously install several extensions, use the following loop:

```

for ext in \
    <extension-1-id> \
    <extension-2-id> \
    <extension-3-id>; \
do
    codium --install-extension "$ext"
done

```

3. Working environment

A set of useful settings for settings.json is as follows:

```

{
    "window.zoomLevel": -0.75,
    "window.restoreWindows": "none",
    "window.restoreFullscreen": false,

    "workbench.startupEditor": "none",
    "workbench.colorTheme": "GitHub Light Monochrome",
    "workbench.statusBar.visible": true,
    "workbench.activityBar.location": "bottom",
    "workbench.editor.defaultBinaryEditor": "default",
    "workbench.editor.empty.hint": "hidden",

    "editor.minimap.enabled": false,
    "editor.wordWrap": "on",
    "editor.defaultFormatter": "yzhang.markdown-all-in-one",

    "explorer.confirmDelete": false,
    "explorer.confirmDragAndDrop": false,

    "files.hotExit": "off",

    "terminal.integrated.enableMultiLinePasteWarning": "never",

    "git.enableSmartCommit": true,
    "git.confirmSync": false,
    "git.autofetch": true,

    "python.defaultInterpreterPath": "/usr/bin/python3",

    "latex-workshop.view.pdf.viewer": "tab",

```

```
    "security.workspace.trust.untrustedFiles": "open"  
}
```

Note: Adjust the Python interpreter path placeholder to match your local installation.
